

The Accumulator pattern

array = [1, 2, 3, 4, 5]

- Initialize a variable $sum = 0$. This serves as our main container to hold the running total.
- Traverse through the array step-by-step and add each element to the sum container.
- If the array is empty, the loop runs 0 times, safely returning initial value = 0.

Dry Run:

Start	array[i]	sum + element	Sum
i = 0	1	0 + 1	1
i = 1	2	1 + 2	3
i = 2	3	3 + 3	6
i = 3	4	6 + 4	10
i = 4	5	10 + 5	15

Output = 15

```

sum = 0;
for (let i = 0; i < array.length; i++) {
    sum += array[i];
}
return sum;
    
```
